

Tara McCormack,
IT Manager
CLG Developments Ltd

“At CLG we have the knowledge and experience to handle a project no matter how complex”

CLG was founded by Mr Peter Connors in 1979 and is now managed by his son Kieran.

The company has grown in a planned and highly organised manner which has resulted in a company structure and a framework organised and operated efficiently to meet requirements and provide a range of services to our various clients.

We have developed an impressive portfolio of successfully completed contracts.

- Charlemont Bridge – LUAS
- Rosslare Harbour
- Ballymore Eustace Primary School
- Carlow County Council one stop shop

Many of our clients are responsible for major changes in Irish society.

- The Department of Justice, Equality and Law Reform
- The Office of Public Works
- The Irish Prison Service
- The Department of Defence
- The Department of Foreign Affairs
- The Department of Education
- An Bord Gais
- Iarnród Éireann
- LUAS
- The E.S.B.

We presently operate a Civil Engineering and Construction company. Our latest project is the Luas extension to Cherrywood.

With such an extensive range of projects, each sizeable and complex, an accountancy management software package to handle all financial data is essential.

Tight accounting control, with easy access to real time business information, is paramount and we must have absolute confidence in our IT solution.

We have been dealing with Software Support Systems Ltd since 1998 and I can request assistance in any area of our business that has to do with IT. They have a genuine understanding of our business and they provided us with ABM accounting software. It handles our requirements perfectly. Committed costs per team and site managers reports are provided on a weekly basis. It integrates with the payroll and our specialist plant system and is configured to operate with Microsoft terminal services option

I feel with ABM accounting that our business can grow in any direction. If we require additional fields, reports or integration to specialist applications it's available to us. I have selected for software assurance which guarantees me updates on a regular basis and also ensures that changes in technology are catered for.

**ASHBROOK**
engineering

Mechanical Services Contractors

Here at Ashbrook Engineering we pride ourselves on providing our clients with:

- A Quality Service
- On time
- On Budget

We are accredited with I.S. EN ISO9001:2000 quality management system and our belief in "Investment Breeds Success" has helped us to become a market leader in our field.

Today's highly competitive market demands quick informed decisions based on a holistic view of our business. In an industry where the success of an individual job can make or break some companies, technology is key.

When selecting our accounting solution it was most important to select one that suited our industry and that would have proper on-going support. With this in mind we selected Advanced Business Manager Accounting software a totally integrated solution, provided by Software Support Systems Ltd. It was refreshing to work with a company that understood our business and were able to provide valuable advice on the setup of the system.

All our costs are trapped at purchase order and payroll stage and this ensures that timely information is constantly flowing throughout the organisation.

We enter up our estimates for each project and when the costs are charged against element specific categories we can accurately track actual costs against budget on an almost real time basis.

The efficiency and accuracy of the information available within the company is excellent.

Every posting appears real time so I can compare what's on order, delivered and invoiced and even what's paid. This transports straight through to nominal ledger so not only are my job costs up to date so are my management accounts.

This has been an invaluable investment and has grown with our business to make us one of the market leaders in our field. I have no trouble recommending this solution to other companies.
